

General Spotting Techniques

1. Use only enough spotter to wet, do not soak stained area.
2. Use brush to work chemical into stain and agitate the stained carpet.
Do not use carpet brush to brush across carpet - damage to fibers may occur.
3. After a stain has been loosened with **101 Carpet Spotter**, **103 Take-Out** or **102 Beverage Stain Remover**, it should be rinsed from the carpet by extraction. Clear water should be used in the extractor. If an extractor is not available, clear water can be sprayed on the carpet and vacuumed out with a wet/dry vacuum. If a wet/dry vacuum is not available, a white terry-cloth towel can be used to blot the liquid out.

101 Carpet Spotter

General purpose spotter for removing greases, oils, traffic spots and other assorted spots. Contains a mildly alkaline blend of surfactants.
Pint 910671

102 Beverage Stain Remover
