

E-Spray Electrostatic Sprayers Disinfect • Sanitize • Odor Control

A Systems Approach

Electrostatic spray technology is providing innovative new methods to apply Multi-Clean brand disinfectants, sanitizers, and odor counteractants to a variety of surfaces. The E-Spray method helps insure fast coverage of complex and hard to reach surfaces that could be easily missed.

Validation and Compliance

Multi-Clean has tested and validated its line of EPA registered disinfectants and sanitizers to insure that activity levels remain constant before and after using the E-Spray Gun. Each E-Spray Gun is supplied with appropriate secondary container labels to affix to the E-Spray Gun container to insure OSHA compliance.

Liquid Adhesion

The electrostatic positive charge inserted into the droplet enables the droplet to adhere itself to the surface via the cationic charge. As the droplets hit the surface they create an even spread because they hold their cationic charge for approximately 2 -3 seconds therefore not creating drips as two positive charges will repel from each other.

Dwell Time

The E-Spray Gun enables water based RTU solutions to meet their dwell time, therefore ensuring that the solution works to its full capabilities. The 3 way nozzle can be used to change the amount of solution applied which, in turn enables the time you would like the surface to remain wet.

Electrostatic Wrapping

When you spray a solution that is charged with electrostatics, the solution will envelop the target. When spraying, static charge stays with the solution for up to five feet.

Gun Features
